

eMOP™

THE POWER OF CLEAN

Bucketless Floor Cleaning System

INNOVATIVE CLEANING TOOLS... ENGINEERED TO LAST

MILWAUKEE DUSTLESS BRUSH
Gordon Brush Wisconsin, LLC

eMOP™: EVOLVED, EFFICIENT,

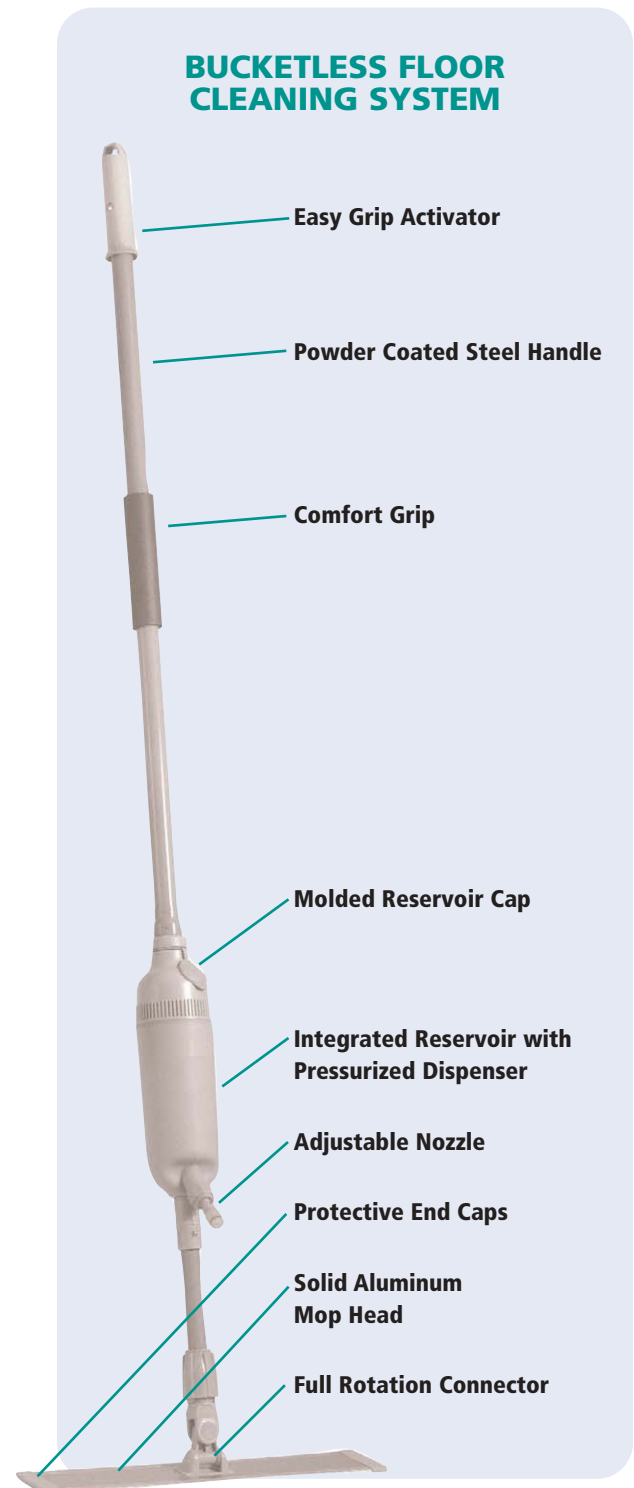

Professional cleaners have been using string mops and wringer buckets for decades. Although cumbersome, they are still in use today because there has not been a superior solution available to the industry. The eMOP from Milwaukee Dustless Brush changes everything!

The eMOP System: Superior in Every Way

The eMOP provides your cleaning staff with a fully self-contained dispensing mop system, as well as a fully integrated dust and sweep tool, reducing the economic costs and environmental concerns associated with traditional dust mop and wringer bucket/string mop systems.

Going far beyond the current gravity-fed systems, the patented eMOP is a fully pressurized spray mop which dispenses uncontaminated cleaning solution directly to the floor. This lightweight, well-balanced and ergonomic tool is designed from the ground up to support modern Green Cleaning programs.* With significant economic savings in reduced chemical usage, reduced water usage and decreased staff time to perform floor cleaning tasks, the Milwaukee Dustless eMOP delivers improved cleanliness while reducing costs and environmental impact.*

When compared to other microfiber mops, the eMOP design is technically and operationally superior in all wet mop functions: reservoir, activator, dispenser, mop handle, mop frame, and pads. In addition, the eMOP system introduces new features to the market that were previously unavailable. The result is a mop system that exceeds all existing technological, ergonomic and performance standards. **Milwaukee Dustless Brush provides innovative cleaning tools...engineered to last.**

*See back cover for more on the green benefits of the eMOP

ERGONOMIC.

THE MILWAUKEE DUSTLESS eMOP BUCKETLESS FLOOR CLEANING SYSTEM

The new eMOP provides a range of new and innovative technical breakthroughs.

Easy Grip Activator—Slight downward motion on top handle activates automatic spray mechanism dispensing 5 ml stream of cleaning solution directly to the floor. Supports use of a natural mopping grip with less operator fatigue than current thumb activator designs.

Comfort Grip—High density rubber grip provides operator with excellent control over mop head movement. Washable grip meets all infection control standards.

Steel Shaft—Provides an extremely strong, light weight frame. eMOP total weight 2 lbs. with reservoir empty. 4 pounds with reservoir full.

Integrated Reservoir—24 oz. fluid reservoir covers up to 3,200 square feet of floor space without refilling. Semi-translucent tank is calibrated for visually checking solution levels. Suitable for refilling from a standard 24 oz. refill bottle or dilution control hose. Requires no proprietary filling jugs.

Pressurized Dispenser—Patented mechanical dispensing system distributes a regulated 5 ml stream of uncontaminated cleaning solution directly to the floor. Allows operator to adjust volume of cleaning solution dispensed based on soiling conditions.

Molded Reservoir Cap—Easy snap off, push on reservoir cap remains fixed to the mop frame when open, preventing loss of cap.

Adjustable Nozzle—Operator controls solution flow, output volume and direction. Ball and socket joint rotates to set spray height. Nozzle positioned high above mop head for exceptional chemical coverage on floor.

Full Rotation Connector—Allows for full rotation of the mop head in traditional figure 8 mopping pattern. Double Lock System uses both C-Clip and Threaded Over Lock cap to hold mop head securely to handle.

Solid Aluminum Mop Head—16.5 inch aluminum mop head supports 18 inch mop pads. Molded end caps protect walls and furniture. Heavy gauge Velcro® holds pads tightly to mop head.

FLAT MOP DUST & SWEEP

Mop Head

Easy Off Cord
Remove without
contacting pad.

Wet Pad—Featuring a 70/30 split microfiber pile, the eMOP Wet Pads provide superior cutting and lifting power, improved soil retention as well as increased water absorption. Less water remains on the floor after mopping, reducing slip and fall risks. Supports infection control programs—allows you to designate specific pads for high risk areas. 18 x 6.3 inches.

Easy Off Cord
Remove without
contacting pad.

Dust Pad—Unique "rolled edge" construction combined with 70/30 split microfiber material for superior dust retention. Dust and sweep with the same pad. eMOP Dry Pad construction compresses dust below the mop head and captures dust that typically evades standard flat edge pads. Extra wide size covers greater floor area with each sweep. 18 x 6.5 inches.

Scrub Pad—Allows for removal of stubborn soiling from floor surface prior to wet washing. Suitable for use with both eMOP Flat Mop and Spray Mop tools. 22 x 5 x .75 inches.

eMOP™ GREEN CLEANING BENEFITS

The growing awareness of the harmful effects of traditional cleaning compounds has led to the development of new cleaning products. These new cleaning

products are significantly less harmful to the facility, cleaning personnel, and the environment. However, outdated wringer buckets and string mops are ill-designed to capitalize on the benefits of these new chemicals. The return on investment in purchasing green chemicals is negated by the amount of product required to fill a two gallon wringer bucket and the amount of product wasted by dumping the residue water down the drain.

The eMOP Bucketless Floor Cleaning System from Milwaukee Dustless Brush has been designed to offer a completely new option for all green floor cleaning programs. The breakthrough features of the eMOP support and simplify daily maintenance operations and provide operators with a professional tool that enhances the benefits of any green cleaning program.

Reduced Chemical Contact

- Significant reduction in volume of chemicals required for standard floor cleaning tasks.
- Reduced water waste and lower volume of grey water and chemicals introduced into sewage system.
- Completely enclosed system provides no off gassing of chemicals as found in open bucket systems.
- No chance for bucket tipping and flooding of the floor.
- Fully Integrated Pump Dispenser System eliminates wringer over-splash.

Reduced Chemical Usage and Cross Contamination Between Rooms

- Covers up to 3,200 square feet of floor space before refilling.
- Only fresh uncontaminated cleaning solution is applied to the floor.
- Changing the microfiber pads in each room reduces the possibility of cross contamination from room to room.
- Soiled bucket water and unused chemicals are completely removed from the cleaning process.
